WHY GET VACCINATED TO GO ABROAD?

The World Health Organization and The Centers for Disease Control and Prevention agree that the COVID-19 vaccine helps reduce the risk of serious illness and helps prevent the spread of COVID-19. We have learned a lot by sending students abroad during this pandemic. Hear us out on why this is really important for all study or intern abroad students:

BEING VACCINATED CAN HELP YOU AVOID:

#1 Decreased access to travelling.
You may not be able to get into the country where your program is located or travel to all the other beautiful countries where you want to go. Example: Did you know that if you want to travel to the UK to study or go on that lifetime dream of a Harry Potter tour, you must have a vaccination?

#2 Getting sick enough your family has to come get you.
You might get sick and seriously ill. And your family will be very concerned and drop their lives to fly over to you. This could be very stressful and costly, and you'll miss out on studying and exploring your new home with friends.

#3 Spreading disease in the community.
You could spread COVID-19 to onsite staff, their kids, other students, or the local communities you want to get to know.

#4 Not experiencing iconic moments.
You face restrictions that stop you from entering certain restaurants or museums or visiting the iconic monuments you have always wanted to see. And, what's worse, is if you've paid to see them, you may not get your money back. Not being vaccinated may also mean you have to quarantine if you are in contact with someone who tested positive, whereas a vaccinated person may be able to skip that with a negative test.

#5 Getting off track with your degree.
You may miss classes due to illness or testing positive and having to quarantine/isolate. This may put your academic career in jeopardy.
